FreshLink Kenya

Less waste. More income. Better food.

Presenter: **Sadiki-Amuri**

Contact Information: [mastertenskgsadikey@gmail.com]

Our Core Vision

-Transforming Kenya's agricultural supply chain from a source of waste to a pillar of wealth.

-Building a zero-waste bridge between diligent smallholder farmers and modern commercial buyers.

Key Metaphor: Fast, fresh, and direct—from the farm to the table.

The Post-Harvest Crisis

- Massive Waste: Up to 40% of all food produced in Kenya spoils or is lost before ever reaching a consumer's plate.
- No Infrastructure: Smallholder farmers lack access to localized, affordable, and functional cold storage.
- Exploitative Networks: Farmers face extreme reliance on predatory middleman brokers, completely stripping their profitability.
- Data Point: Research in Kiambu highlights market-access gaps and poor post-harvest handling as the primary drivers of economic loss.

Presenting FreshLink Kenya

- **The Ecosystem**: An end-to-end platform that seamlessly unifies a digital marketplace, physical storage, and smart logistics.
- **Community Storage**: Proximity-based, solar-powered cold hubs built directly near farming clusters.
- **Direct Trade**: Disintermediating the supply chain by connecting growers directly with institutional buyers.
- **Data-Driven**: Providing smallholders with real-time analytics regarding market demand and fair pricing.

FreshLink Cycle

a. **Harvest:** Smallholder farmer harvests fresh, perishable produce.
b. **List:** Farmer lists the available yield on the intuitive FreshLink mobile portal.
c. **Store:** Produce is instantly moved to a nearby solar-powered FreshLink cold hub.
d. **Order:** Commercial buyers browse real-time inventory and place automated orders.
e. **Deliver:** FreshLink coordinates optimized collection and fast-tracked shipping.
f. **Payout:** Digital escrow clears, and the farmer receives immediate, transparent payment.

Unlocking a Massive Market

- **The Supply Side:** Hundreds of thousands of Kenyan smallholder horticultural farmers growing high-value, highly perishable fruits and vegetables.
- **The Demand Side:** Commercial institutions requiring a predictable, high-quality supply chain (Supermarkets, Restaurants, Hotels, Schools, and Wholesale Hubs).
- **Geographic Launchpad:** Initial operations targeting high-yield horticultural counties directly supplying the massive Nairobi metropolitan area.

Monetization & Revenue Streams

- **Storage Fees**: Affordable pay-per-use micro-fees for community cold hub utilization.
- **Transaction Commission**: A flat 5% marketplace commission taken on successful farmer-to-buyer sales (e.g., KSh 500 revenue on a KSh 10,000 transaction).
- **Logistics & Delivery Fees**: Distance-calculated shipping fees paid during order fulfillment.

B2B Premium Subscriptions: Monthly recurring tiers for large enterprise buyers unlocking priority access to prime inventory.

Why FreshLink Wins

- **The Full-Stack Advantage:** Traditional competitors offer either just software or just logistics. FreshLink connects Marketplace + Storage + Transportation.

- **Solar Reliability:** Bypassing erratic grid constraints via decentralized, green-energy cold hubs.

- **True Disintermediation:** Replacing 3 to 4 expensive steps of middlemen with a clean, one-click digital pipeline.

Our Execution Roadmap

- **Phase 1 (The Pilot):** Onboard 100–200 focused horticultural farmers, activate 1–2 initial cold hubs, and secure 10–20 cornerstone business buyers near Nairobi.
- **Phase 2 (The Expansion):** Scale to 1,000+ farmers, diversify high-loss crop varieties, deploy more storage hubs, and optimize the mobile software experience.
- **Phase 3 (The Scale):** Replicate the validated infrastructure across all major agricultural counties throughout Kenya.
- **Acquisition Channels:** Partnering directly with established agricultural cooperatives and local grassroots farming groups.

3-Year Scaling Milestones

- **Year 1 Goal:** Prove the unit economics (200 farmers, 20 institutional buyers, 2 functional hubs).
- **Year 2 Goal:** Aggressive regional growth (1,000+ farmers, 100+ commercial buyers, expanded transport fleet).
- **Year 3 Goal:** Macro-penetration (5,000+ farmers, multi-county networks, premium crop category additions).

Driven by Purpose & Policy

- **Economic Power:** Substantially driving up net smallholder profit margins while lowering consumer grocery costs.
- **National Alignment:** Directly executing on Kenya's National Post-Harvest Strategy by expanding local access to vital storage and processing technologies.
- **Leadership Alignment:** Spearheaded by SADIKI-AMURI alongside technical, agritech, and operational experts.

Join Us to Stop Food Waste

Funding Target: Seeking **KSh 5,000,000** in pilot capital funding.

<u>Strategic Asset Allocation</u>

- **40%** Solar Cold Storage Infrastructure Deployment
- **25%** Marketplace Software & Technology Optimization
- **20%** —Logistics Fleet & Supply Chain Coordination
- **15%** Farmer Acquisition, Onboarding, and Field Training
